

Database Systems 10127

Database Project

Presentation Instructions

Presentation date: Last week of class

Please read these instructions carefully.

1. You will present the project in class next week. Sign up in the Google Doc.
2. Mixed groups (from two different classes) can present at any available time convenient for all group members/
3. All group members must be present for the presentation.
4. Please open your camera when you are presenting.
5. All group members have to present.
6. The presentation must be given in English.
7. The presentation needs to include
 - a. Introduction – the topic you picked and a description of the system
 - b. Data – what are the different parts of the system and what data you are collecting
 - c. Users – define at least two types of users that need the data
 - d. ERD – Show all the entities and the relationships between them
 - e. Tables – list the tables created for your database
 - f. Question and updates – what do the different users want to do with the data.
You do not need to have all the queries ready, but you do need to list the questions that you plan to ask. If you have written queries you may present them (optional).

IMPORTANT

Please do not start from the ERD.

You need to **spend time thinking and discussing** your system, the users and the data. The entities and the ERD will grow out of this discussion, from the questions your users will want answered and from the updates they want to do to the database.
